SUBJECT INDEX TO VOLUME XX—1969

AERODYNAMICS

See also Base Drag, Boundary-Layer Analysis, Cones, Pitot Tubes, Razor Blade Technique, Shock Tubes, Wall Jets.

The effect of end-plates on the two-dimensionality of a vortex wake, J. M. R. Graham, p. 237 (August).

BASE DRAG

Reduction of base drag by boat-tailed afterbodies in low speed flow, W. A. Mair, p. 307 (November).

BOUNDARY-LAYER ANALYSIS

An improved reversed-flow formulation of the Galerkin-Kantorovich-Dorodnitsyn multi-moment integral method, H. E. Bethel, p. 191 (May).

Correlation of constant pressure turbulent boundary layer measurements on insulated walls, J. A. P. Stoddart, p. 151 (May).

Laminar boundary layers over permeable curved surfaces, B. R. Clayton and B. S. Massey, p. 259 (August).

The calculations of three-dimensional turbulent boundary layers; (iii) Comparison of attachment-line calculations with experiment, N. A. Cumpsty and M. R. Head, p. 99 (May).

BUCKLING

See also Vibration.

Application of the discrete element method to the buckling analysis of rectangular plates under arbitrary membrane loading, D. J. Dawe, p. 114 (May).

Buckling of a long flat panel with a series of equidistant longitudinal supports in combined longitudinal compression and shear, W. H. Wittrick and P. L. V. Curzon, p. 17 (February).

Nodal lines for long plates in combined shear and compression with sinusoidal edge rotations, W. H. Wittrick and P. L. V. Curzon, p. 1 (February).

Shear buckling of orthogonally stiffened, infinitely long simply-supported plates—The stiffeners having torsional and flexural rigidities, K. C. Rockey and I. T. Cook, p. 75 (February).

The post-buckling behaviour of simply-supported square plates, A. C. Walker, p. 203 (August).

CIRCULATION CONTROL

Errata to the paper published in August 1968 by R. J. Kind "A calculation method for circulation control by tangential blowing around a bluff trailing edge", p. 306 (August).

CONES

Measurements of the flow field on a 15° semi-vertex angle blunt cone at M=8.6, N. B. Wood, p. 88 (February).

The supersonic flow past an elliptic cone, B. A. Woods, p. 382 (November).

FATIGUE

A note on the shear stress criterion for fatigue failure under combined stress, R. E. Little, p. 57 (February).

GKD METHOD

See Boundary-Layer Analysis.

HEAT TRANSFER

Errata to the paper published in August 1968 by R. E. Luxton "The calculation of heat transfer coefficients from skin friction coefficients in the compressible laminar boundary layer on an aerofoil", p. 202 (May).

PITOT TUBES

Displacement effects on pitot tubes with rectangular mouths, A. Quarmby and H. K. Das, p. 129 (May).

RAZOR BLADE TECHNIQUE

Simplification of the razor blade technique and its application to the measurement of wall-shear stress in wall-jet flows, B. R. Pai and J. H. Whitelaw, p. 355 (November)

SATELLITES

Attitude dynamics and stability conditions of a non-rigid spinning satellite, L. C. Rossi, R. C. Michelini di San Martino and R. Ghigliazza, p. 223 (August).

SHOCK TUBES

Effect of a continuous area convergence on the motion of a shock wave, P. L. Wilcox, p. 248 (August).

STRUCTUBES

See also Buckling, Fatigue, Vibration

A bending theory for multi-layer anisotropic conical shells, B. -D. Liaw, p. 61 (February)

An experimental study of the flexure of some triangular sections, B. Nath, p. 140 (May).

Long cylindrical tube subjected to two diametrically opposite loads, J. C. Yao, p. 365 (November).

TURBOMACHINERY

Flow between a rotating and a stationery disc, F. J. Bayley and J. M. Owen, p. 333 (November).

VIBRATION

See also Satellites

An improved method of matrix displacement analysis in vibration problems, W. Carnegie, J. Thomas and E. Dokumaci, p. 321 (November).

Transfer matrices for beams loaded axially and laid on an elastic foundation, B, A. Djodjo, p. 281 (August).

Vibration characteristics of straight blades of asymmetrical aerofoil cross-section, W. Carnegie and B. Dawson, p. 178 (May).

Vibrations of tapered cantilever beams and shafts, A. V. Krishna Murty and K. R. Prabhakaran, p. 171 (May).

VORTICES

See Aerodynamics.

WALL JETS

See also Razor Blade Technique

The turbulent wall jet in an arbitrary pressure gradient, I. S. Gartshore and B. G. Newman, p. 25 (February).

AUTHOR INDEX

(*Volume XX*)

BAYLEY, F. J. and OWEN J. M.

Flow between a rotating and a stationery disc, p. 333 (November).

BETHEL, H. E.

An improved reversed-flow formulation of the Galerkin-Kantorovich-Dorodnitsyn multi-moment integral method, p. 191 (May).

CARNEGIE, W. and DAWSON. B.

Vibration characteristics of straight blades of asymmetrical aerofoil cross-section, p. 178 (May).

CARNEGIE, W. THOMAS, J. and DOKUMACI, E.

An improved method of matrix displaceplacement analysis in vibration problems, p. 321 (November).

CLAYTON, B. R. and MASSEY. B. S.

Laminar boundary layers over permeable curved surfaces, p. 259 (August).

COOK, I. T. *see* ROCKEY, K. C.

CUMPSTY, N. A. and HEAD, M. R,

The calculations of three-dimensional turbulent boundary layers. (iii) Comparison of attachment-line calculations with experiment, p. 99 (May).

CURZON, P. L. V. *see* WITTRICK, W. H.

DAS, H. K. *see* QUARMBY. A.

DAWE, D. J.

Application of the discrete element method to the buckling analysis of rectangular plates under arbitrary membrane loading, p. 114 (May).

DAWSON, B. *see* CARNEGIE. W,

DJODJO, B. A.

Transfer matrices for beams loaded axially and laid on an elastic foundation, p. 281 (August).

DOKUMACI, E. *see* CARNEGIE. W.

GARTSHORE, I. S. and NEWMAN. B. G.

The turbulent wall jet in an arbitrary pressure gradient, p. 25 (February).

GHIGLIAZZA, R. *see* ROSSI, L. C.

GRAHAM, J. M. R.

The effect of end-plates on the two-dimensionality of a vortex wake, p. 237 (August).

HEAD, M. R. *see* CUMPSTY, N. A.

KIND, R. J.

Errata, p. 306 (August)

KRISHNA MURTY, A. V. and PRABHAKARAN, K. R.

Vibrations of tapered cantilever beams and shafts, p. 171 (May).

LIAW, B. -D.

A bending theory for multi-layer anisotropic conical shells, p. 61 (February).

LITTLE, R. E.

A note on the shear stress criterion for fatigue failure under combined stress, p. 57 (February).

LUXTON, R. E.

Errata, p. 202 (May).

MAIR, W. A.

Reduction of base drag by boat-tailed afterbodies in low-speed flow, p. 307 (November).

MASSEY, B. S. *see* CLAYTON, B. R.

MICHELINI DI SAN MARTINO, R. C. *see* ROSSI, L. C.

NATH, B.

An experimental study of the flexure of some triangular sections, p. 140 (May).

NEWMAN, B, G. *see* GARTSHORE, I. S.

OWEN, J. M. *see* BAYLEY, F. J.

PAI, B. R. and WHITELAW, J. H.

Simplification of the razor blade technique and its application to the measurement of wall-shear stress in wall-jet flows, p. 355 (November).

PRABHAKARAN, K. R. *see* **KRISHNA MURTY, A. V.**

QUARMBY, A. and DAS, H. K.

Displacement effects on pitot tubes with rectangular mouths, p. 129 (May).

ROCKEY, K.C. and COOK, I. T.

Shear buckling of orthogonally stiffened, infinitely long simply-supported plates—The stiffeners having torsional and flexural rigidities, p. 75 (February).

ROSSI, L. C., MICHELINI DI SAN MARTINO, R. C. and GHIGLIAZZA, R.

Attitude dynamics and stability conditions of a non-rigid spinning satellite, p. 223 (August).

STODDART, J. A. P.

Correlation of constant pressure turbulent boundary layer measurements on insulated walls, p. 151 (May).

THOMAS, J. *see* **CARNEGIE, W.**

WALKER, A. C.

The post-buckling behaviour of simply-supported square plates, p. 203 (August).

WHITELAW, J. H. *see* **PAI, B. R.**

WILCOX, P. L.

Effect of a continuous area covergence on the motion of a shock wave, p. 248 (August).

WITTRICK, W. H. and CURZON, P. L. V.

Buckling of a long flat panel with a series of equidistant longitudinal supports in combined longitudinal compression and shear, p. 17 (February).

Nodal lines for long plates in combined shear and compression with sinusoidal edge rotations, p. 1 (February).

WOOD, N. B.

Measurements of the flow field on a 15° semi-vertex angle blunt cone at M = 8.6. p. 88 (February).

WOODS, B. A.

The supersonic flow past an elliptic cone, p. 382 (November).

YAO, J. C.

Long cylindrical tube subjected to two-diametrically opposite loads, p. 365 (November).
